

MAJOR FACILITIES DIVISION

Box 280, White City, SK S4L 5B1
Phone: (306) 779-2200 Fax: (306) 779-2217

White City is the home base for Carson Energy Services' Major Facilities Construction Group.

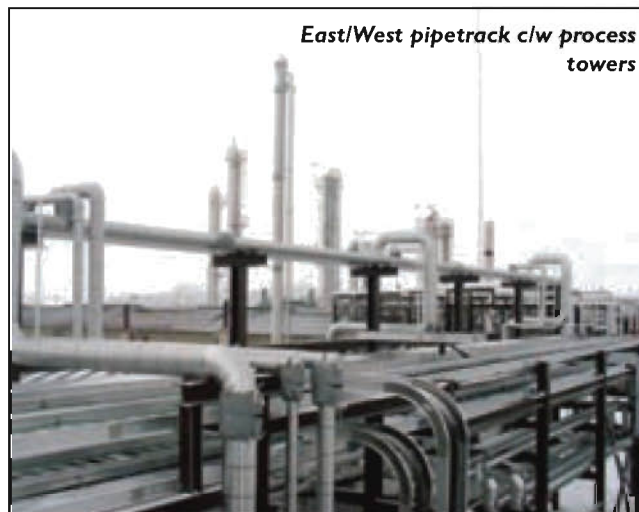

Although the Company had done this type of work for several years prior, a separate division dedicated solely to facility requirements in the water and oil & gas industries was introduced in June of 2008, when the company joined forces with Top-Kick Oilfield Maintenance. Key personnel with industry experience were engaged in order to provide clients with the service and quality they expect from CES.

Pipe bridge over access road and into existing plant

Corner junction to booster compressor from existing plant

East/West pipetrack clw process towers

The scope of the Major Facilities Construction Group's work ranges from new construction to plant upgrades, demolition and plant maintenance.

All phases of work from civil to structural and mechanical are done, and no size of job is too large, or too small.

The Company is in the process of building a specialized fabrication facility in White City equipped with overhead crane equipment, and specially equipped hydrotesting, blasting and painting areas.

Equipment such as bobcats, hoes, cranes, hotshot service equipment, scaffolding, testing equipment, and services such as trucking are available to clients. All operators are fully certified and qualified.

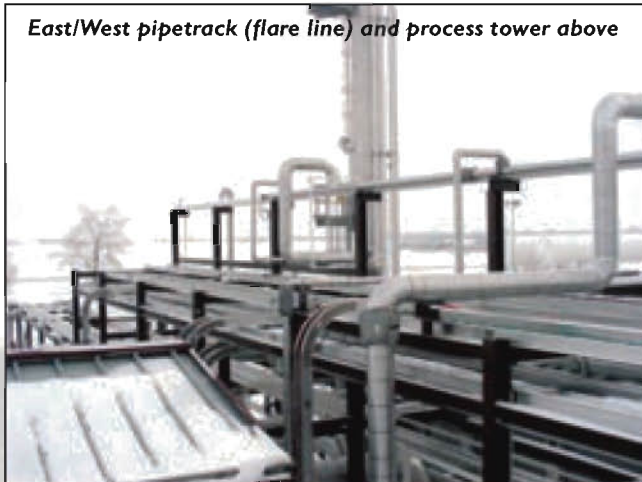

As well, the White City location is able to offer a wide variety of training requirements for the construction industry.

Every CES employee and subcontractor is fully trained and certified in First Aid, H₂S, WHMIS, PST and TDG, as well as any job-specific safety training that may be required.

The Major Facility Division offers exceptional quality control, estimating and project management. Our workforce includes fully qualified welders (piping and structural), quality control personnel, pipefitters, carpenters, scaffolders, safety co-ordinators, qualified crane and equipment operators and labourers.

SAFETY FIRST

Both CES safety policies and client protocols are followed, to ensure that an optimal safety environment is achieved.
